

In this module, you will focus on learning the concepts that underpin Artificial Life systems and how to implement such systems. You will develop an appreciation of how advanced ideas and techniques modelling the properties of living systems and the exploitation of these techniques in computer science and robotics. This module will be heavily focused on the practical elements and workings of artificial life systems.

7COM1032 - Artificial Life with Robotics is a 30-credit module, and it requires around 300 hours of student effort.

To get your work started, please study the Module Information provided under Units, as it contains the learning outcomes, reading list and other key information about this module. It will not take long, and it will put you in good standing for the rest of the module.

We hope that you will enjoy studying this module with us!

## Key staff members

The module is taught by Dr Luke Wood and Dr Abolfazl Zaraki, and they are here to support you in your academic studies and challenge you to achieve your best work.

# Assessment Overview

There are three assessments on this module, as outlined below. The assessments are carefully designed to provide you with opportunities to apply and demonstrate what you have learned. The details for each assignment (including submission dates) are provided in the Assignments section. To pass this module, you must achieve 50% overall.

| Assessment details           |                     |   |         |            |            |
|------------------------------|---------------------|---|---------|------------|------------|
| Assignment Title             | Individual or Group | Type of assignment and feedback provided  | Grade % | Date set   | Due in     |
| <b>Agent based modelling</b> | Individual          | You will develop and analyse a model that simulates the impact of an infectious disease. You will receive written feedback and a score.               | 35%     | 6/10/2025  | 7/11/2025  |
| <b>Robotic simulation</b>    | Individual          | You will develop and analyse the performance of a simulated robot that must perform a particular task. You will receive written feedback and a score. | 35%     | 10/11/2025 | 12/12/2025 |
| <b>In-class Test</b>         | Individual          | You will answer 15 multiple-choice questions about the range of topics covered in this module. Feedback will be in the form of a final score.         | 30%     | 6/1/2026   | 6/1/2026   |

# Module Specific Requirements

There are 6 hours of timetabled learning activities each week led by academic staff; this will be structured as follows:

- Lecture 2-hours on campus (Fridays)
- Practical A session 2-hours on campus (see your timetable)
- Practical B session 2-hours on campus (see your timetable)

You can find information about the sessions you have been allocated to in your personal timetable. In addition to timetabled sessions, you will engage with other learning activities such as conducting independent research.

Additional key information – including the teaching delivery plan – can be found under **Module Specific Requirements** (<https://herts.instructure.com/courses/124806/pages/module-specific-requirements>) (available under Units > Module Information).

## Recent Activity

✉ Assignment due date changed: Robotic simulation, 7COM1032-0901-2025 - Artificial Life with Robotics (<https://herts.instructure.com/courses/124806/assignments/387337>)

- 🔊 Coursework file update (<https://herts.instructure.com/courses/124806/announcements/940478>)
- ✉️ Need Help Locating Project Dataset ([https://herts.instructure.com/courses/124806/discussion\\_topics/934278](https://herts.instructure.com/courses/124806/discussion_topics/934278))
- 📝 Assignment created - Robotic simulation, 7COM1032-0901-2025 - Artificial Life with Robotics (<https://herts.instructure.com/courses/124806/assignments/387337>)
- 📣 online link - type your questions and feedback on the online lecture! (<https://herts.instructure.com/courses/124806/announcements/932455>)
- 📣 Please Join Tomorrow's Online Lecture 10 Minutes Early (<https://herts.instructure.com/courses/124806/announcements/932053>)
- 📣 **IMPORTANT Reminder: ONLINE LECTURE this Friday 14/November at 2 PM** (<https://herts.instructure.com/courses/124806/announcements/929633>)
